Peter Bonadonna is a veteran paramedic having 37 years in metropolitan and rural EMS experience. In addition to a field practice he directs and teaches the Monroe Community College Paramedic Program, a CAAHEP accredited program in Rochester, New York.

A pioneer of sorts, Peter was the first provider to put a computer in the ambulance for medical records and one of the originators of using cell phones for telemetry and medical control. Despite objections, he continued to teach paramedics to read and interpret 12 lead ECGs two years before the equipment was available to acquire them in the ambulance.

Today, Peter is doing the exact same thing with Point-of-Care ultrasound (POCUS). He has an ultrasound machine in the classroom and teaches anatomy and physiology with the device so that students can actually see what they’re learning about. Peter recognizes that point-of-care ultrasound is transformative and can substantially improve the care we deliver in the prehospital and hospital environment.

Peter will prove to you that POCUS is fun, easy and tremendously powerful in terms of what it can offer EMS.

**November 2nd 2017, from 7 pm to 9 pm at the Genesee Co Training Center. ALL levels welcome. To register visit www.lpccnems.org, email: rmccartin@lakeplains.org, or call 585-345-6110. CME Provided.**
