Tactical Casualty Care for Law Enforcement Officers and First Responders: (TCC-LEFR) This (8 hour) course teaches emergency first responders (police officers, firefighters, emergency medical technicians, etc.) the basic medical care interventions that will help save an injured responder’s or victim’s life until EMS personnel can safely enter a tactical scene. The approach is divided into 3 phases, depending upon the tactical situation. The course combines didactic lecture with practical hands-on experience. The participant will learn life-saving medical actions such as bleeding control with a tourniquet, bleeding control with gauze packs or topical hemostatic agents, and opening an airway to allow a casualty to breathe. This program includes dynamic scenarios using the using the UNIT Solutions UNIT4 training system, a non-lethal, CO2 powered M4 rifle. The UNIT4 shoots 8-millimeter, biodegradable marking and non-marking rounds, while maintaining the fit, form, function, and recoil of a standard M4.

The UNIT4 combines training fidelity and non-lethality to achieve its goal of helping law enforcement personnel train as much as they want, where they want.

Sponsored by: Philipstown Volunteer Ambulance Corps.

Dates: December 17 – 18, 2019

Time: 6PM-10:30PM (Attendance to both sessions required)
